Sorry guys, I totally forgot that Crimson was using one of my servers for renforums. This server was turned off (I should have checked). However, I still have the server and I turned it back online. I also noticed there are many other sites on this server, I apologize!

Can Crimson/Blazer contact me for the IP and Password so they can bring those sites back up? All the data is still on the Virtual Machine, nothing is corrupt or missing. I reset the root password so it can be accessed.

My bad, plz don't hurt me.
